Antenna and EM Modeling with Matlab

Sergey Makarov

Antenna and EM Modeling with Matlab Sergey Makarov **An accessible and practical tool for effective antenna design**

Due to the rapid development of wireless communications, the modeling of radiation and scattering is becoming more important in the design of antennas. Consequently, it is increasingly important for antenna designers and students of antenna design to have a comprehensive simulation tool.

Sergey Makarov's text utilizes the widely used Matlab software, which offers a e flexible and affordable alternative to other antenna and electromagnetic modeling tools currently available. After providing the basic background in electromagnetic theory necessary to utilize the software, the author describes the benefits and many practical uses of the Matlab package. The text demonstrates how Matlab solves basic radiation/scattering antenna problems in structures that range from simple dipoles to patch antennas and patch antenna arrays. Specialized antenna types like fractal antennas and frequency selective surfaces are considered as well. Finally, the text introduces Matlab applications to more advanced problems such as broadband and loaded antennas, UWB pulse antennas, and microstrip antenna arrays.

For students and professionals in the field of antenna design, Antenna and EM Modeling with Matlab:

- Strikes an important balance between text and programming manual
- Provides numerous examples on how to calculate important antenna/target parameters
- Provides means for modifying existing codes for various individual projects
- Includes companion website with Matlab codes and antenna geometry files

The present MATLAB codes are only supported by MATLAB 5 and 6 (up to 2004).

From reader reviews:

Carlos Reese:

Do you have favorite book? Should you have, what is your favorite's book? Publication is very important thing for us to learn everything in the world. Each guide has different aim or even goal; it means that e-book has different type. Some people feel enjoy to spend their time for you to read a book. They are reading whatever they have because their hobby is actually reading a book. Why not the person who don't like examining a book? Sometime, man or woman feel need book once they found difficult problem or exercise. Well, probably you will need this Antenna and EM Modeling with Matlab.

Ian Louviere:

Book is definitely written, printed, or descriptive for everything. You can recognize everything you want by a reserve. Book has a different type. As we know that book is important issue to bring us around the world. Beside that you can your reading expertise was fluently. A e-book Antenna and EM Modeling with Matlab will make you to become smarter. You can feel considerably more confidence if you can know about everything. But some of you think that open or reading a book make you bored. It is not make you fun. Why they are often thought like that? Have you in search of best book or appropriate book with you?

Donald Link:

On this era which is the greater particular person or who has ability to do something more are more special than other. Do you want to become one among it? It is just simple strategy to have that. What you should do is just spending your time little but quite enough to enjoy a look at some books. One of the books in the top list in your reading list is usually Antenna and EM Modeling with Matlab. This book and that is qualified as The Hungry Mountains can get you closer in growing to be precious person. By looking upwards and review this book you can get many advantages.

Richard Diller:

What is your hobby? Have you heard which question when you got scholars? We believe that that question was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. And you know that little person such as reading or as reading through become their hobby. You need to understand that reading is very important as well as book as to be the point. Book is important thing to provide you knowledge, except your teacher or lecturer. You get good news or update about something by book. Numerous books that can you choose to adopt be your object. One of them is Antenna and EM Modeling with Matlab.
