ADHD as a Model of Brain-Behavior Relationships

Leonard F. Koziol, Deborah Ely Budding, and Dana Chidekel

Series Title: Springer Briefs in Neuroscience

Subseries: The Vertically Organized Brain in Theory and Practice

It's been a basic neurological given: the brain does our thinking, and has evolved to do the thinking, as controlled by the neocortex. In this schema, all dysfunction can be traced to problems in the brain's lateral interactions. But in scientific reality, is this really true? Challenging this traditional cortico-centric view is a body of research emphasizing the role of the structures that control movement-the brain's vertical organization-in behavioral symptoms.

Using a well-known, widely studied disorder as a test case, *ADHD as a Model of Brain-Behavior Relationships* offers an innovative framework for integrating neuroscience and behavioral research to refine diagnostic process and advance the understanding of disorders. Identifying a profound disconnect between current neuropsychological testing and the way the brain actually functions, this revision of the paradigm critiques the DSM and ICD in terms of the connectedness of brain structures regarding cognition and behavior. The authors argue for a large-scale brain network approach to pathology instead of the localizing that is so common historically, and for an alternate set of diagnostic criteria proposed by the NIMH. Included in the coverage:

- The diagnosis of ADHD: history and context.
- ADHD and neuropsychological nomenclature
- Research Domain Criteria: a dimensional approach to evaluating disorder
- The development of motor skills, executive function, and a relation to ADHD
- The role of the cerebellum in cognition, emotion, motivation, and dysfunction
- How large-scale brain networks interact

Heralding a more accurate future of assessment, diagnosis, and treatment of neurodevelopmental disorders, *ADHD as a Model of Brain-Behavior Relationships* represents a major step forward for neuropsychologists, child psychologists, and psychiatrists, or any related profession interested in a neuroscientific understanding of brain function.

From reader reviews:

Anthony Sierra:

Nowadays reading books are more than want or need but also get a life style. This reading behavior give you lot of advantages. The huge benefits you got of course the knowledge the rest of the information inside the book which improve your knowledge and information. The information you get based on what kind of guide you read, if you want have more knowledge just go with training books but if you want truly feel happy read one using theme for entertaining such as comic or novel. The actual ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) is kind of guide which is giving the reader capricious experience.

Jeanie Hynes:

Information is provisions for individuals to get better life, information these days can get by anyone in everywhere. The information can be a understanding or any news even a problem. What people must be consider when those information which is inside former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one the actual resource are convinced. If you get the unstable resource then you buy it as your main information there will be huge disadvantage for you. All those possibilities will not happen in you if you take ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) as the daily resource information.

Dennis Rodriguez:

This ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) is completely new way for you who has attention to look for some information because it relief your hunger of information. Getting deeper you in it getting knowledge more you know or you who still having bit of digest in reading this ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) can be the light food for yourself because the information inside this kind of book is easy to get by anyone. These books develop itself in the form that is certainly reachable by anyone, sure I mean in the e-book type. People who think that in guide form make them feel sleepy even dizzy this e-book is the answer. So there isn't any in reading a e-book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the item! Just read this e-book kind for your better life along with knowledge.

Gloria Castaldo:

As a student exactly feel bored to be able to reading. If their teacher inquired them to go to the library or make summary for some e-book, they are complained. Just very little students that has reading's spirit or real their interest. They just do what the instructor want, like asked to the library. They go to presently there but nothing reading critically. Any students feel that studying is not important, boring along with can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for yourself. As we know that on this period of time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's

country. Therefore this ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) can make you experience more interested to read.
